REVISED DECEMBER 1983

- Package Options Include Plastic and Ceramic DIPs
- Dependable Texas Instruments Quality and Reliability

description

These devices contain two independent 4-input expanders. The '60 perform the Boolean function $X = ABCD$ when connected to X and \bar{X} inputs of SN5423/SN7423, SN5450/SN7450, or SN5453/SN7453. The 'H60 performs the same function when connected to X and \bar{X} inputs of SN54H50/SN74H50, SN54H53/SN74H53, or SN54H55/SN74H55.

The SN5460 and SN54H60 are characterized for operation over the full military temperature range of -55°C to 125°C . The SN7460 and SN74H60 are characterized for operation from 0°C to 70°C .

NOTES:

1. Connect to \overline{X} input of '23, '50, or '53 circuit.
2. Connect to X input of '23, '50, or '53 circuit.
3. Connect to \overline{X} input of 'H50, 'H53, or 'H55 circuit.
4. Connect to X input of 'H50, 'H53, or 'H55 circuit.

Resistor values shown are nominal.
