

# Leucosphenite

# BaNa<sub>4</sub>Ti<sub>2</sub>B<sub>2</sub>Si<sub>10</sub>O<sub>30</sub>

©2001 Mineral Data Publishing, version 1.2

**Crystal Data:** Monoclinic. *Point Group:*  $2/m$ . Crystals tabular and elongated || [100], typically wedge-shaped, to 3 cm; as rosettes and laminated masses. *Twining:* Common  $\perp \{001\}$ , contact plane  $\{001\}$ .

**Physical Properties:** *Cleavage:*  $\{010\}$ ,  $\{001\}$ , distinct. *Fracture:* Uneven to subconchoidal. *Tenacity:* Brittle. Hardness = 6–6.5 D(meas.) = 3.04–3.09 D(calc.) = 3.103

**Optical Properties:** Transparent to translucent. *Color:* Colorless, white, pale to dark green, pale yellow, pale gray to blue; brown to black and sectorial from inclusions. *Streak:* White. *Luster:* Vitreous to pearly.

*Optical Class:* Biaxial (+). *Orientation:*  $Z = b$ ;  $Y \wedge c \simeq 0^\circ$ . *Dispersion:*  $r > v$ , may be crossed.  $\alpha = 1.644\text{--}1.648$   $\beta = 1.660\text{--}1.664$   $\gamma = 1.687\text{--}1.691$   $2V(\text{meas.}) = 75^\circ\text{--}78^\circ$

**Cell Data:** *Space Group:*  $C2/m$ .  $a = 9.814(4)$   $b = 16.851(5)$   $c = 7.210(3)$   
 $\beta = 93.35(3)^\circ$   $Z = 2$

**X-ray Powder Pattern:** Mont Saint-Hilaire, Canada.  
4.22 (100), 8.45 (90), 3.37 (70), 2.891 (60), 3.31 (50), 2.813 (40), 2.732 (40)

Chemistry:	(1)	(2)	(1)	(2)
SiO <sub>2</sub>	54.3	53.66	MnO	trace

(1) Inagli massif, Russia; corresponds to  $(\text{Ba}_{0.94}\text{Fe}_{0.04}\text{Mg}_{0.04})_{\Sigma=1.02}(\text{Na}_{3.82}\text{K}_{0.18})_{\Sigma=4.00}\text{Ti}_{1.92}\text{B}_{2.02}\text{Si}_{10}\text{O}_{29.95}$ . (2) Mont Saint-Hilaire, Canada; by electron microprobe, corresponds to  $(\text{Ba}_{0.94}\text{Ca}_{0.01})_{\Sigma=0.95}(\text{Na}_{4.10}\text{K}_{0.12})_{\Sigma=4.22}(\text{Ti}_{1.99}\text{Nb}_{0.06})_{\Sigma=2.05}\text{B}_{2.08}\text{Si}_{9.78}\text{O}_{29.90}$ .

**Occurrence:** In pegmatite in syenite (Greenland, Russia, Canada); in aegirine-feldspar veins (Inagli massif, Russia); an authigenic mineral in shales (Utah and Wyoming, USA).

**Association:** Elpidite, aegirine, epididymite, albite, polyolithionite (Narsarsuk, Greenland); arfvedsonite, eudialyte, neptunite, lamprophyllite, lorenzenite (Inagli massif, Russia); albite, aegirine, narsarsukite, molybdenite, calcite, fluorite (Mont Saint-Hilaire, Canada).

**Distribution:** From Narsarsuk, Greenland. In the USA, from the Green River Formation, in the Uinta basin, Utah and in the Bridger basin, Sweetwater Co., Wyoming. At Mont Saint-Hilaire, Quebec, Canada. From the Inagli massif, 30 km west of Aldan, Yakutia, and in the Lovozero massif, Kola Peninsula, Russia. From the Dara-i-Pioz massif, Alai Range, Tien Shan, Tajikistan. At Ohmi, Niigata Prefecture, Japan.

**Name:** From the Greek for *white* and *wedge*, its color and crystal habit.

**Type Material:** University of Copenhagen, Copenhagen, Denmark; The Natural History Museum, London, England; Harvard University, Cambridge, Massachusetts; National Museum of Natural History, Washington, D.C., USA, 135739, R3878.
